DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over O'Connor et al., (U.S. Patent No. 5,838,306) in view of Wagner et al., (U.S. Patent No. 5,434,928).

As per claim 1, O'Connor shows a pointing device (In Fig.1 and In Col.3 lines 42-44):

a housing (In Fig.1) and a displacement signal generator (element 111 In fig.1 and In Col.3 lines 50-54); an input panel installed on the housing for inputting signature signal data (element 113 and In col.4 lines 15-17).

O'Connor does not teach a hand written input data inputted to perform an identification process, Wherein the handwritten data inputted to the input panel will be transmitted to a computer to perform an identification process.

Wagner shows a hand written input data inputted to perform an identification process; wherein the handwritten data inputted to the input panel will be transmitted to a computer to perform an identification process (In Abstract and In Col.4 lines 43-67 and Col.5 lines 1-20). It would have been obvious to one of ordinary skill in the art, at the time of the invention was made to allow the teaching of verification of handwritten

inputted data via digitizer into the input device of O'Connor's because it would have reduced and rejected forgery committed by persons who wants to steal identity theft.

As per claim 2, O'Connor shows the pointing device being a mouse (I fig.1 and In col.3 lines 42-43).

As per claim 3, O'Connor shows the displacement signal generator having a roller installed at bottom of the housing for generating displacement signals (In col.3 lines 42-53).

As per claim 4, the displacement signal generator having a trackball installed at a top end of the housing for generating displacement signals (In Col.3 lines 51-54, element 111 acts as a pointer finger to input manipulation and control selection from a user to move cursor or menu on a screen).

As per claim 5, O'Connor shows a button installed on the housing for generating button signals (In Fig.1 element 107 and 109 as a actuation switches and In col.3 lines 47-48).

Conclusion

3. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Art Unit: 2673

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
